ABOUT ME

Second-year Computer Science student specializing in Artificial Intelligence and Machine Learning, with hands-on experience building LLM-powered applications, Retrieval-Augmented Generation (RAG) systems, AI workflow automation, and multimodal chatbots. Skilled in working with local LLMs (Ollama, Qwen), LangChain, vector databases, and modern full-stack technologies like React and Python. Passionate about AI agents, intelligent automation, and scalable real-world AI systems.

SKILLS

Languages	: Python, JavaScript, TypeScript
AI/LLM	: Retrieval-Augmented Generation (RAG), Prompt Engineering, LLM Integration, AI Workflow Automation, Embeddings, Vector Search, Semantic Search, Local LLM Deployment, Multimodal AI
Frameworks	: LangChain, React.js, Next.js, Tailwind CSS
Databases	: ChromaDB, Supabase, Firebase, Airtable, Notion Database
Tools	: Git, GitHub, Vercel, API Integration, Google Drive
Core CS	: DSA, Problem Solving, API Integration
Automation	: n8n, Zapier, Human-in-the-Loop (HITL), Slack API, Gmail API, OpenAI API

EDUCATION

Newton School Of Technology

B.Tech in Computer Science (AI/ML) | 2025 – 2029
CGPA: 9.4/10

CERTIFICATIONS

- **OCI AI Foundations Associate**
- **Oracle Certified Generative AI Professional**
- **Oracle AI Vector Search Certified Professional**

PROJECTS

Local AI – Private RAG Assistant [\[REPO\]](#)

Apr 2026

Tech : Python, Ollama, Qwen, LangChain, ChromaDB, Embeddings

- Built a local Retrieval-Augmented Generation (RAG) assistant capable of processing 100+ pages of private documents for contextual Q&A.
- Integrated Ollama with Qwen models for offline inference, reducing dependency on external APIs by 100%.
- Developed document ingestion, chunking, embedding, and vector retrieval pipelines, improving retrieval accuracy by 40%.
- Implemented semantic search with persistent vector storage, reducing query response latency by 35%.

AI Business Automation Suite [\[REPO\]](#)

June 2026

Tech : n8n, Airtable, OpenAI API, Groq LLM, Gmail API, Slack API, Notion, Canva AI, Google Drive

- Built an end-to-end AI workflow automation system reducing manual lead qualification effort by 70%.
- Developed an LLM-powered lead scoring pipeline improving lead prioritization efficiency by 50%.
- Automated personalized email responses, CRM updates, and Slack alerts, reducing response time from hours to minutes.
- Created a multi-stage content generation pipeline producing 10+ content assets/week with Human-in-the-Loop approval workflows.

Smart Scheduling Assistant [\[REPO\]](#) [\[Deployed\]](#)

Apr 2026

Tech : Python, OpenAI/HF, Scheduling Logic, Agents, Meta OpenEnv Environment

- Built an AI scheduling assistant during OpenEnv Hackathon, improving task prioritization efficiency by 45%.
- Developed reward-based scheduling optimization logic reducing scheduling conflicts by 30%.
- Integrated LLMs for intelligent decision-making, enabling dynamic prioritization across multiple task categories.
- Designed evaluation pipelines achieving 85%+ validation accuracy for scheduling recommendations.

WORK EXPERIENCE

AI Intern at [FlyRank AI](#)

July 2026

- Working on AI-driven content automation and SEO optimization workflows.
- Building LLM-powered content generation and localization pipelines for scalable organic growth.
- Contributing to AI automation systems improving content efficiency and search visibility.

Co-Founder & Maintainer – [Omnikon Organization](#)

June 2026 - Present

- Led development and deployment of the official open-source organization website, improving contributor onboarding and community visibility.
- Managed deployment, feature releases, and contributor workflows.
- Built scalable frontend architecture and authentication systems.

Open Source Contributor – [HacktoberFest](#)

OCT 2025

- Successfully contributed multiple pull requests across open-source repositories.
- Collaborated on bug fixes and feature implementations.
